"This was my first serious approach for IAPLC contest in 2020 and I had the goal to rank around 350. Finally I achieved a 365 place. The tank was hard to maintain since I created to close to the front and had nearly any place for maintenance or plant growth. I worked several times on the layout which can be seen in the images of different stages of the tank. I also added lots of different plant species after initial setup."
