"This tank and planting came in two stages. The first stage was a "plants and stones only" layout. After I took a first picture for the European "WebAquascapingContest" I changed the tank, took out some plants and added cosmetic sand. I used some crushed stones to build details and added a few species around the pathways I created with the sand. Especially the new Plants from the recently released Tropica Special Edition, Rotala Vietnam and Blyxa Japonica really gave this tank a good balance and added necessary impact. I reached a great 6th ranked in the EAPLC Nano Category with this scape wich is my best rank in the bigger competitions so far."
